

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

Apropos of Spelling Reform

The renewed activity in the discussion of spelling reform, and of the best means of furthering its progress, has suggested to me the wisdom of a rather exhaustive discussion of the subject from the standpoint of what must be done to bring it about, and of what would be the advantages, and the obstacles and disadvantages, involved in the reform. The subject is rather hackneyed in its general aspects, to be sure; and it is not easy to treat of it without being diverted either by the levity or ridicule with which the matter is dismissed by some, or by the somewhat hysterical advocacy of reform of others who are extreme in their pessimism about our present system of spelling.

The first thing that has impressed me in the consideration of the subject has been the need of some exact knowledge of what would be the result of any particular measure of reform. How is this knowledge to be obtained, and what method of exhibiting the proposed changes will convey the clearest idea of the results which they will effect. It is obvious that a complex such as the English language, having upwards of one hundred thousand parts (ignoring the fact that there are several times this number of words reckoned as part of the language), cannot be grasped in all its parts by the mind without the aid of statistics; and no scientist would attempt the simplification of so complex a system without exact tables or statistics showing the parts affected, and the nature of the effect caused by any proposed modification. Similarly, I believe that any substantial improvement of our spelling which is to be accomplished by convention must be equally based upon an exact knowledge of what the effect of any proposed improvement will be, not with reference to a few dozen or a few hundred words, but with reference to our written language as a whole. There is no way of obtaining this knowledge other than by the systematic making of lists and tables of words by which the effects of proposed changes may be studied and analysed; and this is a dreary and thankless task. Yet it must be done before any definite results of any system can be clearly or certainly stated. Lists of such words have already been made by our philological societies, but they are far from exhaustive so far as I know them; indeed they are but the beginning of the task.

I began to make the accompanying table of words involving spellings in *ae* or *e*, *oe* or *e*, and *ei* or *i*, in the hope that it might lead to some

results or conclusions that would be of value, the selection of these classes of terms for such treatment being made for various reasons. The number of such terms in the dictionaries is large, but was, I thought, not large enough to preclude my making the table; also, more or less had already been attempted in the way of changing the spellings of these terms from the double-vowel form (in *ae*, *oe*, or *ei*) to the single-vowel form (in *e* or *i*) both in groups and in many isolated instances; and they thus afford a means of studying the effects of such attempts. The changing in groups has primarily been chiefly or entirely in reference books in advance of actual usage, either to promote what seemed a desirable change, or to conform to what seemed a tendency of the time.

The making of the table has involved far more labor than I anticipated, and the results which flow from it are discouragingly indefinite. Of course, the table as it stands is not really based upon any phonetic principle, but rather illustrates the various effects and the state of usage (so far as shown by the dictionaries in question) in respect to the spelling of the words in one form or the other. The principle of simplifying our spelling, and remotely of phonetic spelling, is, however, involved in it, but I should like to have presented the words grouped according to a phonetic analysis, which lack of time prevents me from doing. It is to be hoped that should such a table prove suggestive and helpful others of similar and fuller detail, better conceived and better executed, on phonetic principles, will be at hand for the use of those who shall be instrumental in the solution of our spelling problem. There is one improvement, however, that scholars might accomplish without the aid of such tables. By the exercise of an amount of "sweet reasonableness" and mutual concession a common and uniform system of transliteration might be established; and this ought to be done.

The preparation of the table was in brief this: I ran hastily through Webster's International Dictionary and listed the terms belonging to any of the three classes. Those words, such as *equal*, *sphere*, *economics*, etc., that are settled in their spelling in the *e* form or the *i* form, so that there is now ordinarily no consciousness of the existence of two forms, were intentionally omitted from the list; a few others were doubtless overlooked that otherwise would have been included; a few have been listed that are practically settled in the *e* or *i* spelling for the sake of an example or two. However, neither the omission of the one nor the inclusion of the other is considerable enough to take away from the utility of the table as presenting the variations and tendencies of spellings in the classes of words involved.

My list, when made, was compared with the "Oxford English Dictionary" (edited by Dr. James A. H. Murray), the "Century Dictionary," the "Standard Dictionary," "Dunglison's Medical Dictionary,"

(ed. of 1903), and "Gould's Medical Dictionary" (edition of 1898); and the Webster and other dictionaries are respectively designated in the table by W, M, C, S, D, and G. The results of the comparison (which I have made myself to ensure reasonable accuracy) are given in two groups of columns, the symbol for each dictionary being stamped for each word on the side that represents the spelling preferred by that dictionary. When a word is not included in the vocabulary of any of the books the corresponding space is left blank on both sides.

During the year or more over which the preparation of the table has dawdled along I have checked in my reading any of the words that caught my attention; and I have also looked up especially a few words of exceptional interest or importance in the list, such as *haemorrhage*, *haemorrhoid*, *oedema*, etc. The citations made I have totaled, and give them in columns showing the number of citations made for either or both spellings, counting as far as possible only a single citation from any one book or pamphlet for any one word. The citations are mostly from publications of the last fifteen years, and have been made with entire indifference as to the spelling found—that is, I have not watched for words spelt in one way rather than another, since any reasoning based on such information would be worthless. Although the citations recorded are but a few, they afford an index of the facts as to actual usage; but it needs more of them with dates of usage to show with certainty any existing tendency towards one spelling or another; and I should welcome comment, information, or citations bearing upon the question.

The results to be obtained from the table are not important or surprising. A few undisputed facts are made more emphatic, and some pertinent questions are suggested. It seemed worth while to state a few of these, prefacing them by a short resumé of the table; and this I have done below, with any explanation that I felt to be necessary, as my only comment. The further interpretation of the facts and the answer to the questions I leave until future added knowledge or light shall make them clearer than they now are.

The table consists of three parts, the first and largest containing the *ae* or *e* terms; the second the *oe* or *e* terms; and the third and smallest part the *ei* or *i* terms. Some words of the *ae* and *oe* classes have in English either as their only or as secondary spellings the forms *ai* and *oi* respectively. These *ai* and *oi* forms I have intentionally omitted, as *aitiological*, *daimon*, *hetaira*, *paideutic*, *phainopepla*, *homoiousian*, *homoiopteron*, etc. These spellings are used or affected by some scholars, especially those who feel most strongly the influence of the classicizing of spellings in writing on Classical subjects; but the number of such forms is small; and they have no apparent tendency to influence our conventional spellings.

The words given are written in their alphabetic order, with the double-vowel form in each case, although this involves giving under that form numbers of words, such as *aenigma*, *oeconomy*, which are now seldom or never so printed except as a use due to personal idiosyncrasy, an affectation of the archaic, or some reason for the nonce. Besides these words included only for the sake of a few examples, there are others where the certainty of preference for the *e* form is not so great, and which may be used in the double-vowel form regularly by certain classes of writers or in certain connections, but not generally so. From these to those in which the *ae* or *oe* is preferred by usage and all the dictionaries there are examples marking every intermediate stage of uncertainty. No question arises as to the spelling of such words as are a part of the general vernacular and popular literature, such as *enigma*, *economy*, so far as concerns the choice between *ae* or *oe* on the one hand and *e* on the other. Should a general phonetic spelling be discussed they would then come under consideration; but their present spelling is fixed as *e*, and there is no general consciousness of the existence of any other form. Yet the other forms are used occasionally for one or the other reasons above noted, and this fact attests the extreme vitality of the *ae* and *oe* forms. I remember having seen *aenigma*, *oeconomical*, *Europaean*, and some others within about a year; and at the time of this writing have come upon *maeander* in Walter's "History of Ancient Pottery," Scribners, 1905, p. 280. The word *demon* (given as *daemon* in the list) is peculiar. The popular spelling in the vernacular sense of an evil spirit is fixed as "*demon*"; but the Classical sense does not involve, necessarily, the evil import; and the word in the spelling *daemon* or *daimon* is often used by writers in the Classical sense to differentiate it from its ordinary English sense. Indeed, I believe the *ae* spelling is much the more common in cases where the word is so used. The word *Aetna* is also peculiar in that it seems to be fixed in the spelling *Etna* as used of a portable stove (which is the only sense giving it place), although as the name of the mountain no classical writer, I suppose, would now spell it otherwise than *Aetna*. The form *Etna* is here reminiscent of an earlier period when it was to some extent the fashion or usage to spell these classical terms with the *e* instead of *ae* or *oe*. Later views have done away with this fashion or tendency completely; and there is now hardly any field in which the *ae* and *oe* spellings are as uniformly adhered to as they are in literature on Classical and archaeological subjects.

The *ae* and *oe* sections have certain features in common that make it wise to take them together; treating the *ei* table alone. In the first two it is apparent at a glance that there is "confusion worse confounded," and that no one could remember the shiftings back and forth in spellings indicated by the table; nor would any sane person attempt to do so.

Life is too short. Usage itself does not do it; and most words in the table a writer would feel free to write in either way he might choose.

On the whole it is noticeable that M. gives as the preferred forms the spellings in *ae* and *oe* for most of the words except such as are now vernacular or purely literary; that Webster, on the whole, prefers the *ae* and *oe* forms for the same classes of words, except in the case of the *palaeo-* words and some other classes or cases more or less scattered; that Century and Standard have preferred the *e* spellings nearly uniformly for many classes of terms such as *haemo-* words, *palaeo-* words, words in *-rhoea*, etc., but have not attempted to change other classes. Of the medical dictionaries D. prefers the *ae* and *oe* forms, and G. the *e* forms. It is noticeable that the American dictionaries often all agree on the *e* spelling where M. prefers the *ae* or *oe*, so that M. appears on one side and W., C., and S. on the other; in other cases M. and W. run along on one side and C. and S., on the other.

Throughout the table cases of unaccountable inconsistencies occur; thus the classical names *Achaean*, *Aegean*, *Aeneid*, *Aeolian*, *Aeolus*, are treated in as many different ways as there are words.

The citations total 1263 for the *ae* forms and 712 for the *e* forms. Of course one citation, or half a dozen, for any one word would not in itself be indicative of anything as to the general preference in the spelling of the term; but as great a difference as this in a matter of about 2000 citations, which count no book more than once for any one word, is significant, and shows *prima facie* a general preference in the classes of words concerned for the spelling having the majority, of 551.

In the case of the *ei* or *i* terms there is less diversity of usage. There has been no apparent effort on the part of any of the dictionaries to change the spelling from one form to the other; they seem rather to have attempted to follow usage. Usage has given the preference to the *ei* form for certain classes and to the *i* form for others; and as a result we have a comparatively simple state of affairs, with the dictionaries grouped in long lists first on one side, and then on the other, with here and there an exception.

Although the table makes very clear the urgent need of regularizing the spellings of the words involved, it does not afford a basis for the suggestion of any satisfactory system for so doing that is also practical at the present time. The main conclusions and questions suggested by it are given below in separate numbered paragraphs. I have chosen this form of presenting them for the sake of the added clearness and distinctness obtainable, although it gives a disconnected and somewhat inconsequent appearance to what would have a reasonable unity and consecutiveness if the threads of connection were supplied. **The facts which seem evident** from the table or from our common knowledge are:

1. The changes of spelling shown in the table are not uniform even for the same classes of terms.

2. The Oxford English Dictionary has chosen as its preferred form the one preferred in contemporary (British) usage, and has in general noted any material divergence from this in American usage—e. g., *foetus*, *palaeo-* (s. v. in M.).

3. The other general dictionaries have given what they considered to be the spelling in the best usage, except where they have confessedly regularized the spelling by adopting the *e* form in one or more classes.

4. British usage prefers the *æ* and *œ* forms to the *e* forms, as indicated by M., with practical uniformity.

5. American usage prefers the *æ* and *œ* forms as a whole (excepting of course vernacular and purely literary words), but in the cases of certain terms the situation, so far as shown by the tabulated preferences of the dictionaries, is in doubt. These are mostly the medical terms, the terms in *palaeo-* or *paleo-*, and the words *aesthetic*, etc. As to the words *aesthetic*, etc., there is nothing in M. to suggest that the *æ* forms are not still far the more common in American usage. As to the *æ* and *œ* in terms in use in chemical, medical, anatomical, biological, and classical literature *æ* and *œ* are still far the more common in American usage. I am informed by anatomists, biologists, and chemists that the *æ* and *œ* are almost uniformly used by them. In medical terms the *e* form is more in use; but the facts disclosed by my investigations, where carried to some extreme, in the case of a few words, is of considerable interest. For example, the citations for the spellings of *faeces*, *haemorrhage*, *foetus*, *oesophagus* were as follows (counting only one citation from a single book or pamphlet in any case).

Total <i>æ</i> or <i>œ</i> preferred	<i>e</i> preferred
faeces..... 55	35 = 15 Eng., 12 Am., 8 misc.
foetus..... 177	158 = 73 Eng., 63 Am., 22 misc.
haemorrhage.. 611	313 = 113 Eng., 184 Am., 16 misc.
oesophagus ... 497	484 = 288 Eng., 182 Am., 14 misc.
	20 = 15 Am., 5 misc. 19 = 15 Am., 4 misc. 298 = 143 Eng., 140 Am., 15 misc. 13 = 8 Am., 5 misc.

6. This shows some tendency to shift over to the *e* form in the more recent American books, active in the case of some words, limited or hardly perceptible in the case of others.

7. There is less evidence of change of spelling in British usage than there is in American. (The most notable recent evidence of change in British usage known to me is the adoption in some publications of the Cambridge University press of *medieval* and *encyclopedia*, although this appears to be in advance of British usage, as shown by M.)

8. In the case of learned words, especially those of classical learning or reference, such as *Caesar*, *Aegean*, *anapaest*, *archaeology*, etc., the *ae* and *oe* forms show little or no tendency to shift to the *e* spelling; indeed a nearly rigid adherence to the *ae* and *oe* forms in such cases is evident in actual usage.

9. The confusion in the *ae* and *oe* words in present usage, and the greater confusion in the forms given the preference in the dictionaries, is more or less due to the preference of the *e* forms in some cases by the dictionaries and not in others; and there is less confusion in the case of the *ei* or *i* words where no attempt to change the prevalent spelling has been made.

10. A change of spelling which would simplify the spellings of the words given in the table is most desirable.

, 11. Simplification would be accomplished by spelling all these words in the double-vowel form, or all in the single-vowel form.

12. In either case, the same letter or letters would have different values in different words, and therefore if such a change should be made, the spelling would not be phonetic.

13. It would be useless as well as pernicious to attempt to conform the words of common language, such as *sphere*, *equal*, *economic*, to the double-letter form.

14. Most of the words in the list are technical, literary, or learned words which present no difficulty in spelling to those who use them, provided they are uniformly spelt, either as a body or in large classes, in the double-letter or the single-letter form, with exceptions where any particular form offends the taste.

15. There is no likelihood of any general agreement or even of a majority agreement in the use of *e*, at any time in the near future.

16. The use of *ae* cannot be got rid of in English until the scientists' are willing to modify their scientific terminology; and there is no evidence whatever of this being done in the binomial nomenclature of botany or zoölogy, nor any elsewhere for the sake of simplicity of spelling, except as above noted. The *ae* plurals in botanical families, the great number of words in literary use having the plural in *ae*, and the conservatism of botanists, zoölogists, biologists, chemists, classicists, and archaeologists is still too strong for any change on their part.

17. Publishing houses that publish for the British as well as the American market find that adopting the *e* (which is considered an Americanism) tends to injure the sale of their books to the British trade.

18. Considerable changes in our spellings still take place from one cause or another,—witness the greatly increased use of the British

spellings in *-our*, *-re*, and doubled consonants (as in *traveller*) that has taken place within the last fifteen years, doubtless due to the desire to remove the hindrance to British sales arising from the use of the American spellings. A still more noticeable modification of the form of our written language which has come about without apparent advocacy is that which prints the *ae* and *oe* separate instead of together (*æ*, *œ*). (From the mere point of legibility this change seems clearly unfortunate; it seems partly to be due to a feeling that we should Latinize the spelling of our words of Latin origin. I suspect, however, that this merely furnishes a color or *raison d'être* for that form, and that the actual change is largely if not mostly due to the fact that *æ* and *œ* are impractical for typewritten copy, and not as easy to make on the type-setting machines as the *ae* and *oe* involving two finger motions but less arm motion, where the character is included in the machine at all. Be the facts as they may, there is no doubt as to the change in a widely extended number of books; and it is a question of interest as to whether *ae* and *oe* are to become the accepted style. The use of *æ* in Anglo-Saxon terms, such as *Ætheling*, and of *ae* in Gaelic terms, as in the word *Gaelic* itself, are to be considered also in this connection, although the number of instances of their use is very small in English itself.)

19. Any movement for the regularizing of the spelling of these words in the *ae* and *oe* forms would have in its support the almost uniform preference of British usage for the *ae* form, the general preference in usage for this form in the United States, the decided or nearly uniform use of *ae* and *oe* by writers on classical, archaeological, anatomical, chemical, etc., subjects, and any advantage there is in the differentiation of the words from other forms, as the *haemo-* (meaning *blood*) terms, from the *hemi-* (meaning *half*) terms, etc.

20. If the weight of the dictionaries had been cast in favor of the *ae* and *oe* forms (excepting in the case of the words of common usage, such as *sphere*, *enigma*, *equal*, etc.) generally, the spelling in *ae* and *oe* would have probably been nearly uniform.

The following questions are suggested.

1. Is the advantage to be derived from a change from the *ae* and *oe* forms to the *e* form sufficient to make it advisable for Americans to spell with *e* when the British forms are in *ae* and *oe*?
2. Is there any reason for shifting to the *e* form in some classes of these words and not in other classes (to spell, for example: *Achean*, *edile*, *edility*, *Egean*, *Egis*, *Eolian*, *Esopian*, *pretor*, *esthetic*, *ameba*, *homeopath*, *paleo-*, etc.; but to spell: *Achaemenian*, *Aegerian*, *Aeneid*,

Aerarian, Aesopic, Aesthesia, Archaeo-, coelo-, homoeomerous, monoecious, maenad, paean, taenia, etc.)

3. What steps is it *practical* to take *now* towards simplification of these spellings?

4. From the practical, common-sense point of view which spelling ought American writers and educators to favor?

5. Should the dictionaries give the preference to *e* forms when usage does not, without indicating that usage prefers the *oe* or *ae* forms in those cases?
